

Used Forklift Parts

Inevitably, lift truck components will eventually wear out and require replacing. The option of obtaining new parts could become costly so another idea is to buy used components. This can save a lot of money eventually. It is a good idea to purchase used lift truck parts which have been remanufactured. These parts would ensure that you are getting parts which will work for a long time and be productive.

Worn or broken parts which are remanufactured are a less expensive answer as opposed to rebuilding. With rebuilding components, just the parts which are broken or worn out get changed, which means that other wearable parts could break down soon after purchase.

Remanufacturing however offers the best guarantee for second-hand components. Remanufactured parts are taken apart and cleaned and then all wearable pieces are changed. All wearable components are replaced regardless of age or wear which is another rationale why reproduced components generally perform so much better. Whichever component within the part is new and this offers far longer life to the used part. Based on the lift truck components which are being redone, the cleaning process and the complete remanufacturing process will differ.

After complete disassembly, the engines are oven cleaned. Different parts of the engine like spark plugs, pistons, rings, valves, valve springs, and filters could be replaced during the remanufacture process. The engines are hot tested after reassembly to guarantee that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are pressure washed, disassembled and oven cleaned. A thorough examination is performed in order to check for any cracks. Bearings, bushings and seals are all replaced. Typically, the replacement components utilized on transmission components meet OEM specifications.

Some lift truck parts such as the water pump, torque converters, the alternator, steer axles and the starter could be quite serviceable after worn components are replaced. The electronic control in the electric forklift is maintained by the control card. This particular card could even be remanufactured with replacing all aged and worn out components. Not like different forklift components the control card could only have the worn and aged parts replaced.

Components that are remanufactured have to be meticulously inspected upon reassembly to ensure they are in good condition prior to being sold. When acquiring these parts, it is a good idea to make certain that they have undergone all of the proper testing and inspections. On certain larger parts like engines, transmissions and steer axles, OEM specification replacement components must be utilized.

The dealer of used lift trucks and parts can guarantee that the remanufactured parts have met OEM specifications and that these parts meet industry standards. Lots of details go into remanufacturing used parts. This attention to detail offers more serviceability out of reproduced parts compared to the parts that were merely rebuilt.
