

JLG Forklift Parts

Following retirement in the late 1960's, John L. Grove set out on a cross country RV voyage. After spending numerous years establishing his family built crane business with his brother, John had no idea that this journey would give birth to the rise of JLG Industries, Inc. The world leader of mobile aerial work platforms and precision material handling technologies was the end consequence of a road expedition. Whilst on their journey, John spent time conversing with previous business associates whom the Groves stopped to visit along the way. These conversations combined with a tragic incident—two workers being electrocuted on scaffolding when the Groves were traveling to the Hoover Dam— John discovered an infinite market for a product that could swiftly and safely lift people in the air to accomplish maintenance and other construction services. After returning from their vacation, John set up a joint venture with two of his friends and obtained a metal fabricating company in McConnellsburg, Pennsylvania. Opening with a small crew of twenty workers, they fashioned and sold their first JLG aerial work platform in 1970. The business incorporates many of the simple design elements of that original lift into existing versions. Since then, JLG Forklifts have come a long way from when Mr. John L. Grove came back from his fatefull cross-country journey and since the first JLG aerial platform entered the marketplace. As of today, the company has extended itself into many different international marketplaces and continues to develop contemporary machinery to guarantee that clients are able to become safer and more efficient within their workplace.
